

Sur-Drive™

PREMIUM
Oilfield Technologies

Sur-Drive™ Epicyclic Swivel

Premium designed the Sur-Drive™ Epicyclic Swivel System to address multiple problems that drillers have with their top drive washpipe cartridge assemblies.

These seal systems are one of the most common causes of downtime for a drilling rig. The unique epicyclic design of the Sur-Drive offers a solution to these problems by slowing down internal speeds within the cartridge, for any given top drive rotational speed, increasing seal life and significantly reducing related issues.

RPM on Packing Seals Reduced

A planetary gear is integrated into the lower housing. The carrier holds the washpipe and by design rotates 40% slower. This allows the rotational speed to be split 60/40 between lower and upper housings. This raises the Pressure-Velocity values for your existing seals which increases seal life.

Self-Aligning

The Sur-Drive cartridge assembly system has a unique feature for self-centering during installation which compensates for lateral misalignment between the gooseneck and main shaft pilots.

Pre-Compressed Packing Seals

The Sur-Drive cartridge assembly allows for the seals to be compressed on the ground prior to installation by way of eight low torque screws. No special tools are needed to compress these seals.

Hammerless installation

The Sur-Drive cartridge assembly can be inserted horizontally and secured into place with two hub clamps by permanently installing our adapter hubs.

Competitively Priced

True through-bore versions do very well versus ceramic seal based washpipe assemblies costing tens of thousands of dollars more.

Sealed Gear Box

All gear box components are submerged in gear oil which provides constant lubrication and eliminates the need for costly space-consuming roller bearings. Rotary shaft seals are used to keep the oil in, and the dirt out.

Rated to 10,000 PSI

The Sur-Drive cartridge assembly is the only through-bore washpipe system in the industry rated to 10K. Upgrading to 10K from 7500 psi Sur-Drive is as simple as swapping out to a slightly thicker washpipe for easy adoption.

Sur-Drive™ Rental Program

Premium's Sur-Drive™ rental program* helps ensure uptime with your drilling rig by removing the worry and labor out of Sur-Drive rebuilds and replacements. Each rig has 2 Sur-Drive cartridge assemblies, one installed and one spare. Sur-Drive cartridge assemblies are averaging 3-6 months before failure; however if the rig greases the packing daily and gearbox weekly, it is possible for the Sur-Drive to last longer.

When it's time for the rig to install the spare, Premium will pick up the leaking Sur-Drive for rebuild and replace the spare inventory. The spare is to be used when the Sur-Drive fails or leaks, and not during a standard rig inspection/top drive inspection. If the Sur-Drive is swapped out before failure, a tear down fee will apply for that billing cycle.

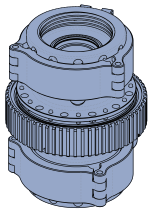

*Rental rate is \$110/day. Rig is responsible for all charges related to grease and special tooling.
